EU-India conference on Advanced Biofuels

The 2nd EU-India Conference on Advanced Biofuels was organised by the Directorate General for Energy of the European Commission and the Ministry of Petroleum and Natural Gas of India under the framework of the India-EU CECP.

The conference aimed at facilitating contacts between industry and technology developers from both the EU and India and eventually establishing cooperation and licencing agreements. Cooperation on research and innovation, which includes biofuels, is an integral part of the EU-India agenda.

This short booklet is a collection of the key technologies and value chains which were presented during the event that was attended by more than 220 participants. The short descriptions of the various value chains have been provided by the technology developers themselves.
